

Environmental Strategy- Do You Have One?

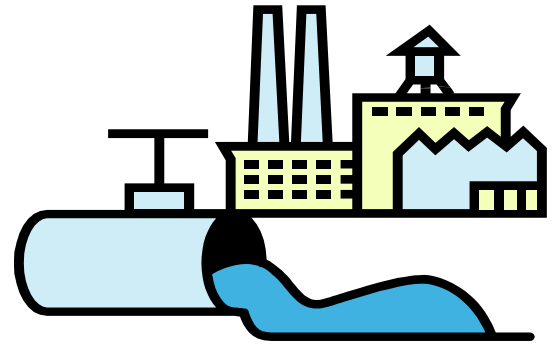

Environmental Policies are continuously being evaluated by Regulators which are resulting in increasing compliance requirements. With these regulatory changes are you prepared to evaluate your operations for compliance? Do you have confidence in your regulatory knowledge?

Agviro provides the following assistance for these and other critical regulations:

- Utilize an Environmental Assessments process to review current operations to identify potential compliance issues and develop due diligence programs. This can be the first phase of developing an Environmental Management System (EMS)
- Obtaining Certificates of Approvals, permits and licences will contribute to an effective EMS. Agviro will work with your operations to determine the most effective EMS with a specialized program of Environmental SOPs and practices.
- A key component to any successful EMS is training. With the investment of time and money to initiate an EMS it will not be effective unless the practices and procedures developed are delivered to your employees. Agviro can develop training programs specific to your operations as well as conduct the training to ensure you are maximizing the benefits of your Environmental Strategies.

Individual Environmental Services are also available and include:

- ▶ Environmental Management Systems
- ▶ Regulatory Reporting; Certificate of Approvals, Permits, Licences
- ▶ Environmental Management Systems

AGVIRO SERVICES

Established in 1992, we are a consulting and engineering design company providing service in:

- Environmental Assessments
- Indoor air quality research and troubleshooting
- Mechanical and electrical design
- Energy efficiency surveys, audits and analysis
- Landscape architecture addressing the natural environment of the facilities.

Troubleshooting existing systems, optimizing your current systems' performance and energy efficiency are hallmarks of AGVIRO's professional and technical services. AGVIRO, Inc. also offers energy surveys and audits, site planning, landscape design, mechanical and electrical systems designs and other specialty services.

AGVIRO Inc.'s services are provided to a wide range of both public and private clients in the industrial, commercial, agricultural and utility sectors. Our emphasis is on maintaining high quality technical skills and to working closely with our clients so that AGVIRO can formulate innovative, cost-effective strategies and solutions in a complex, highly competitive marketplace.
